

UNOFFICIAL MINECRAFT JAVA EDITION GUIDE

TaCZ Beginner Guide PDF

Controls, reloading, aiming, customization, attachments, and
common fixes for Timeless and Classics Guns: Zero.

Version 1.0

Minecraft 1.20.1 TaCZ notes

Beginner friendly

Before You Start

This PDF is an unofficial beginner guide for **TaCZ**, also known as **Timeless and Classics Guns: Zero**. It explains the basic controls and the first gameplay loop so you can quickly start recording or playing with guns in Minecraft Java Edition.

This product does not include the TaCZ mod file. Download the mod only from its official distribution page, such as CurseForge or the project page linked by the author. Do not redistribute mod jar files inside your own paid product.

Tested notes are based on `tacz-1.20.1-1.1.8-release.jar`. Keybinds and menu names may change if you use a different Minecraft, Forge, or TaCZ version.

| 6. Aiming, Firing, and Reloading | 13. One-Page Cheat Sheet |
| 7. Customization and Attachments | |

1. What TaCZ Adds

TaCZ is a modern gun mod for Minecraft. It adds firearms, ammunition, attachments, gun crafting, and customization systems. The default content pack includes many weapon types, from pistols and rifles to sniper rifles and heavy weapons.

Content Type	Beginner Meaning
Guns	Weapons such as pistols, assault rifles, shotguns, machine guns, and sniper rifles.
Ammunition	Each gun needs compatible ammo. If the ammo type is wrong, reloading will fail.
Attachments	Scopes, sights, muzzles, grips, stocks, lasers, extended magazines, and ammo mods.
Gunsmith Table	The main workbench used to craft guns, ammo, and attachments.

2. Requirements and Setup Notes

Use the Minecraft version and mod loader version that match the TaCZ release you downloaded. For the local analyzed file, the jar name indicates Minecraft **1.20.1**.

Item	What to Check
Minecraft Java Edition	TaCZ is for Java Edition modded Minecraft, not Bedrock Edition.
Mod Loader	Install the loader required by the TaCZ download page for your version. Match the loader and Minecraft version carefully.
TaCZ jar	Place the downloaded TaCZ jar in your Minecraft <code>mods</code> folder.
Cloth Config API	Needed for the in-game configuration screen opened with <code>Alt + T</code> . Gameplay may work without the config screen, but the settings menu depends on it.

If Minecraft crashes on startup, re-check the Minecraft version, mod loader version, and dependency list on the official TaCZ page. Version mismatch is the most common modding problem.

3. Default Controls

TaCZ changes how right click behaves while you are holding a gun. In normal Minecraft, right click opens blocks and interacts with entities. In TaCZ, right click is usually used for aiming down sights, so TaCZ adds a separate interaction key.

Input	Action	How to Use It
Left Click	Fire	Hold a loaded gun and left click to shoot.
Right Click	Aim / ADS	Hold right click to aim down sights. This is important for sniper rifles and scoped weapons.
R	Reload	Reload the gun if compatible ammo is in your inventory.
G	Switch Fire Mode	Cycle modes such as semi-auto, burst, or full-auto when the weapon supports them.
H	Inspect Weapon	Plays an inspection animation. Useful for videos and for visually checking the weapon.
Z	Customize	Open the attachment/customization screen while holding a gun.
O	Interact	Open chests, doors, workbenches, and entities while still holding a gun.
V	Melee / Scope Zoom	Without ADS, it works as melee. While aiming with a scope, it changes zoom.
C	Crawl	Default setting is hold-to-crawl.
Alt + T	TaCZ Settings	Open the TaCZ client configuration screen when Cloth Config API is installed.

Suggested OBS input overlay layout for TaCZ videos. H and O are included because they are important TaCZ-specific keys.

4. First 10-Minute Gameplay Loop

If you are completely new, follow this simple loop before trying advanced attachments.

1. Install TaCZ and launch Minecraft with the correct mod loader.
2. Create or obtain a **Gunsmith Table**.
3. Use the Gunsmith Table to craft one gun and the matching ammunition.
4. Put the gun and ammo in your inventory.
5. Hold the gun and press **R** to reload.
6. Hold right click to aim.
7. Left click to fire.
8. Press **G** to test fire mode switching if the weapon supports multiple modes.
9. Press **Z** to open customization and check attachment slots.
10. Use **O** when you want to open a chest, door, table, or entity while holding the gun.

For beginner videos, show this loop slowly once. Viewers understand the mod faster when they can see reload, aim, shoot, fire-mode switching, and customization in one short sequence.

5. Gunsmith Table

The Gunsmith Table is the core crafting station for TaCZ. It is used for guns, ammo, and attachments.

Crafting Shape

Local analysis notes show this pattern:

```
LLL
IBI
I I
```

Symbol	Material
L	Log-tag block
I	Iron ingot
B	Iron block

After placing the table, interact with it to browse available gun, ammo, and attachment recipes from the installed content pack.

6. Aiming, Firing, and Reloading

Aiming

Right click is the default aim key. The default behavior is hold-to-aim, which means you aim only while right click is held.

For scoped weapons, aim first, then use **V** if the scope supports zoom switching.

Firing

Left click fires the gun. If nothing happens, check ammo, reload state, and whether the weapon is actually selected in your hotbar.

Reloading

Press **R** to reload. TaCZ does not automatically reload by default. You need compatible ammo in your inventory. Wrong ammo type is the most common reason reloading fails.

Problem	Likely Cause	Quick Fix
Gun does not fire	Not loaded, no ammo, or wrong ammo	Craft compatible ammo and press R .
Reload does nothing	Ammo type does not match the gun	Check the gun recipe and ammo category in the Gunsmith Table.
Fire mode will not change	Weapon has only one fire mode	Try a rifle or other weapon that supports multiple modes.

7. Customization and Attachments

Hold a gun and press **Z** to open the customization screen. Attachments change weapon behavior and are also useful for making videos visually clearer.

Attachment Type	What It Usually Does	Beginner Tip
Scope / Sight	Changes aiming view and zoom options.	Use scopes for sniper footage and dot sights for quick aiming.
Muzzle	Can change sound, recoil feel, or weapon handling depending on the item.	Try suppressors and muzzle brakes in separate comparison clips.
Grip	Usually affects handling and stability.	Good for assault rifles and automatic weapons.
Stock	Usually affects stability or handling.	Check the customization screen stats before and after changing it.
Laser	Helps with visual aiming or tactical presentation.	Useful for short-form videos because viewers immediately understand aiming direction.
Extended Magazine	Increases capacity for supported weapons.	Helpful for full-auto demonstrations.
Ammo Mod	Changes ammunition behavior for supported weapons.	Use one clear test target when showing differences.

Not every gun accepts every attachment. The compatible slots depend on the gun definition and the installed content pack.

8. Gun and Attachment Compatibility Table

This appendix is generated from the analyzed default TaCZ content pack. It shows which attachment categories are available for each gun. The English labels are paired with internal IDs so you can search and identify items accurately in the Gunsmith Table.

If you install another gun pack or edit the default pack, compatibility can change. Use this as a guide for the analyzed default TaCZ pack.

9. Interacting While Holding a Gun

The **O** key is easy to miss, but it is one of the most important TaCZ controls. Because right click is used for aiming, normal Minecraft interaction can become difficult while holding a gun.

Use **O** when you want to interact with:

- Chests
- Doors
- Crafting tables and other workstations
- The Gunsmith Table
- Entities such as villagers, boats, or rideable entities

In tutorial videos, show **O** once with a chest or Gunsmith Table. Many beginners assume their game is broken when right click keeps aiming instead of opening blocks.

10. AWM and Sniper Workflow

For AWM-style sniper gameplay, the goal is to show a clear sequence: weapon ready, aim, zoom, fire, reload, and inspect. The exact attachments available depend on the weapon and content pack, but the workflow stays similar.

1. Equip the sniper rifle and compatible ammo.
2. Press **R** to reload before the action moment.
3. Hold right click to aim down sights.
4. If a scope supports it, press **V** while aiming to change zoom.
5. Left click to fire.
6. Press **H** after the shot for a clean inspection moment.
7. Press **Z** to show the scope or attachment setup if you are making a tutorial.

Shorts Recording Checklist

- Show the keyboard and mouse overlay before the first shot.
- Keep the crosshair and target visible.
- Use one clear action per clip: reload, aim, shoot, inspect, customize.
- Use English on-screen words for global viewers: Reload, Aim, Fire, Inspect, Customize.

11. Recording Overlay Setup

For OBS Studio, use an input overlay that shows the keys a viewer needs to copy. For TaCZ, the important keys are not only WASD and mouse buttons. You also want **R**, **G**, **Z**, **H**, **O**, **V**, and **C**.

Overlay Element	Reason
Mouse left button	Shows firing clearly.
Mouse right button	Shows aiming / ADS clearly.
R , G , Z	Reload, fire mode, customization.
H , O	Inspect and interact. These are TaCZ-specific and helpful for tutorials.
V , C	Scope zoom / melee and crawl.

Recommended simple overlay style for TaCZ tutorial recording.

12. Troubleshooting

Symptom	Check This First	Fix
Minecraft crashes on startup	Wrong Minecraft version, wrong mod loader, or missing dependency	Return to the official TaCZ download page and match every required version.
Gun does not shoot	Reload state and ammo type	Put compatible ammo in inventory and press R .
Reload key does nothing	Ammo is missing or incompatible	Craft the correct ammo from the Gunsmith Table.
Cannot open chests while holding a gun	Right click is being used for ADS	Use O instead of right click.
Zoom does not change	No compatible scope or not aiming	Attach a compatible scope, hold right click, then press V .
Alt + T settings do not open	Cloth Config API may be missing	Install the required config library for your Minecraft version.
Crawl does not work	Gun or server may not support crawl behavior	Check TaCZ settings and server configuration.
Keys conflict with another mod	Shared keys such as R , G , Z , V , C , or H	Open Minecraft controls and move one of the conflicting keybinds.

13. One-Page Cheat Sheet

Goal	Input	Remember
Fire	Left Click	Needs loaded compatible ammo.
Aim	Right Click	Hold by default.
Reload	R	Auto reload is off by default.
Switch fire mode	G	Only works when the weapon supports multiple modes.
Inspect	H	Great for video transitions.
Customize	Z	Use it to attach scopes and other parts.
Interact	O	Use this for chests, doors, workbenches, and entities while holding a gun.
Melee / Zoom	V	Zoom only while aiming with a compatible scope.
Crawl	C	Hold by default.
Settings	Alt + T	Requires Cloth Config API for the config screen.

Best Beginner Practice Sequence

- 1. Craft Gunsmith Table.
- 2. Craft gun and compatible ammo.
- 3. Press R to reload.
- 4. Hold right click to aim.
- 5. Left click to fire.
- 6. Press Z to customize.
- 7. Use O for normal Minecraft interaction while holding the gun.
